HighLIGHT by Pasan

Industrie Standard:

	«DW288»	«Hennecke»	«MB PERC»	MB SWCT	«PASAN»
# tools	> 150	> 142	> 500	> 5	> 100
Installed Capacity	>7GW	>23GW	> 30 GW	> 320 MW	> 20 GW
Market Share:	~35%	~80%	> 30 %	Increasing	> 80%

Complex vs Complicated

MEYER BURGER

Complicated

Complex

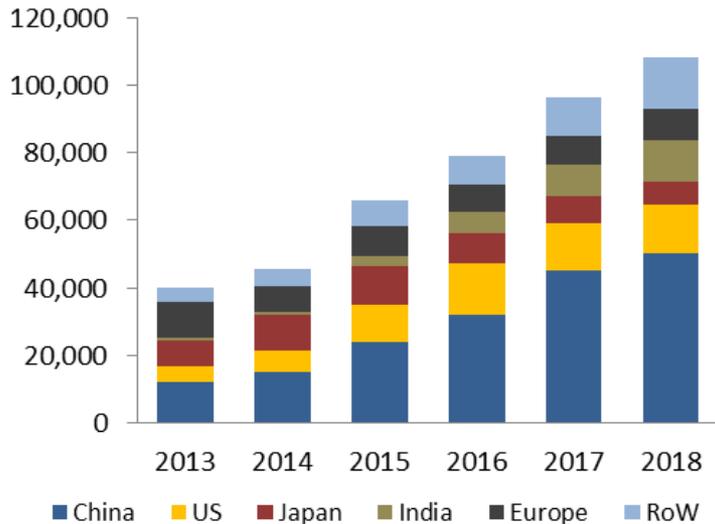

Market PV Tech Research

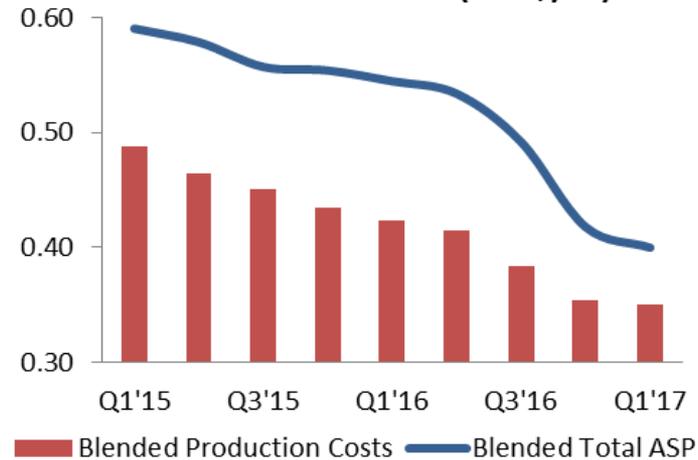

MEYER BURGER

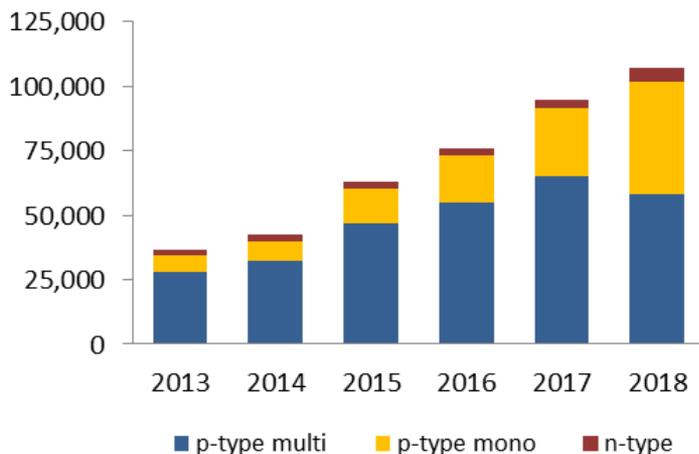

Global PV Demand (MW)

SMSL: Blended Module ASPs & Production Costs (USD\$/W)

c-Si Production (MW)

- Market is expanding to >100GW in 2018
- PERC is the Hype and MB is committed
- N type Mono is still marginal but growing
- Bifacial module about 70 MW (0.1% of market)

PV Market today and tomorrow

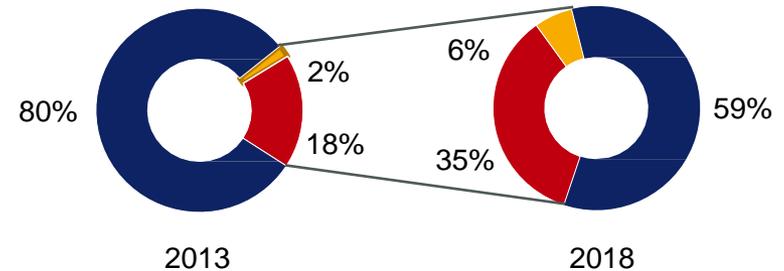

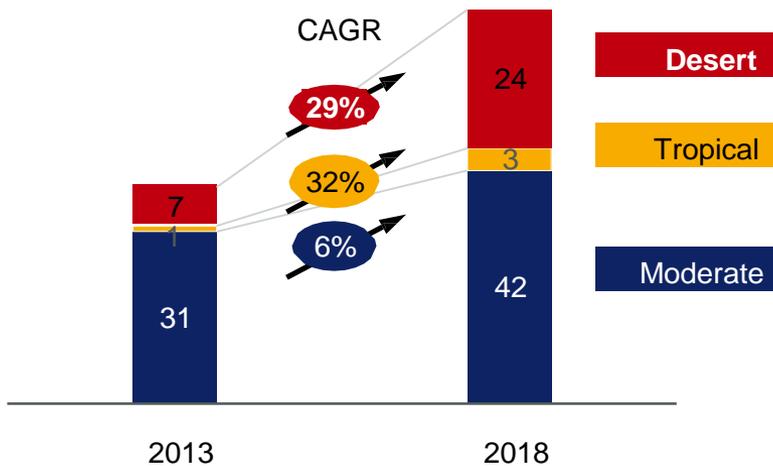

strongest CAGR in Desert & Tropical Zones

MEYER BURGER

Annual global installations [GW] by climatezone

Installations by climate zones [%]

- LCoE decrease enables PV being competitive even in gas/oil countries, known as high temperature climate zones, projected with highest CAGR
- Markets with desert climate (Saudi Arabia, Morocco)
- Markets with tropical weather (Taiwan, Indonesia, Brazil, Thailand)

Roadmap HJT SWCT GG

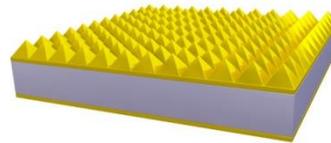

MEYER BURGER

Wafer Thickness => <math><100\ \mu\text{m}</math>

Cell

Cell efficiency => 24%

Wafer

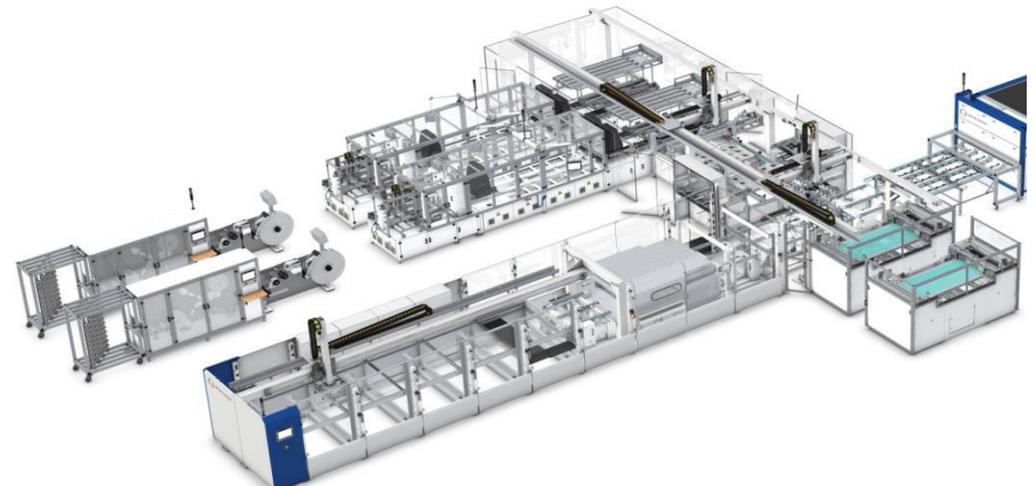

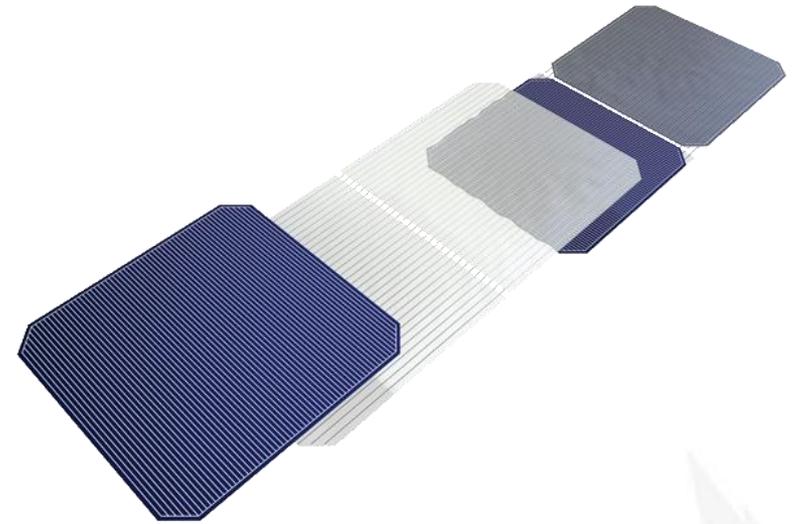

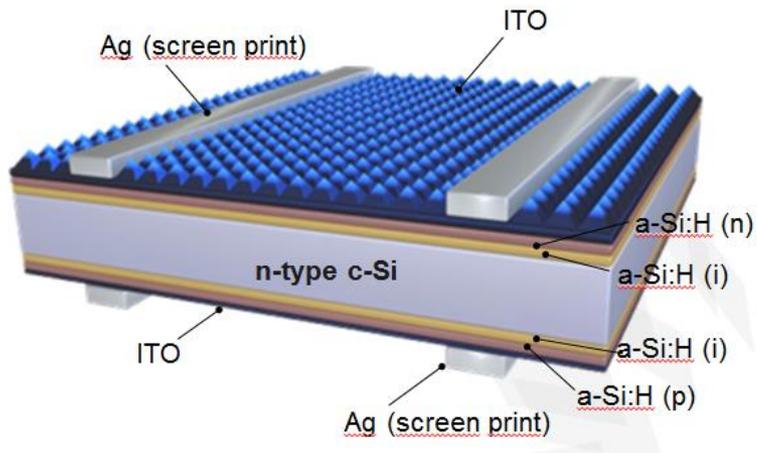

Module eff. => 23%W
reliability => 40 years

Bifacial HJT SWCT module

MEYER BURGER

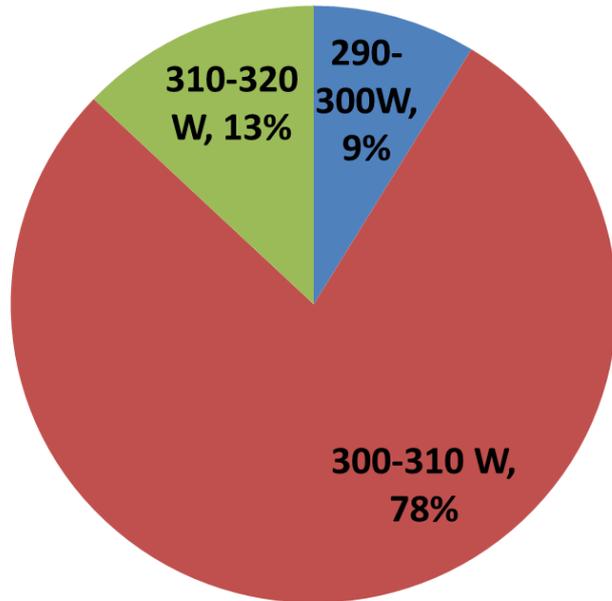

Module Line Performance

MEYER BURGER

Power distribution

1000 modules

	Pmax [W]	Voc [V]	Isc [A]	FF [%]
White Backsheet	330	44.5	9.5	78.5%
Black Backsheet	320	44.4	9.1	79.5%

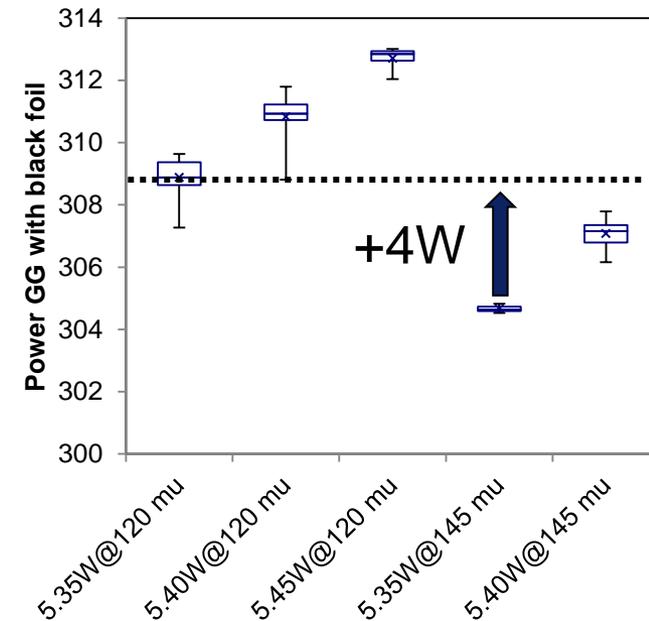

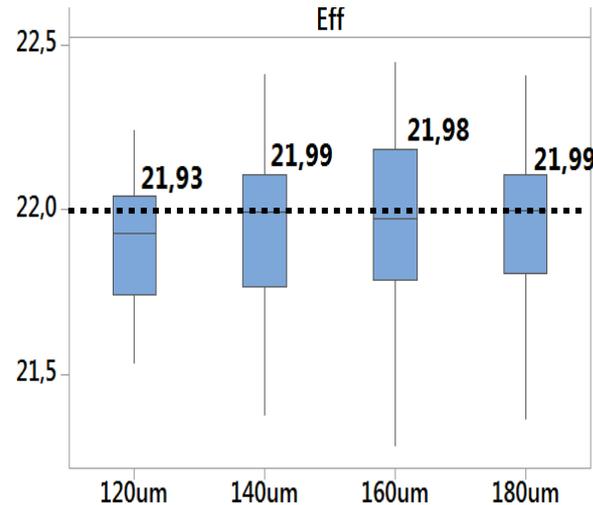

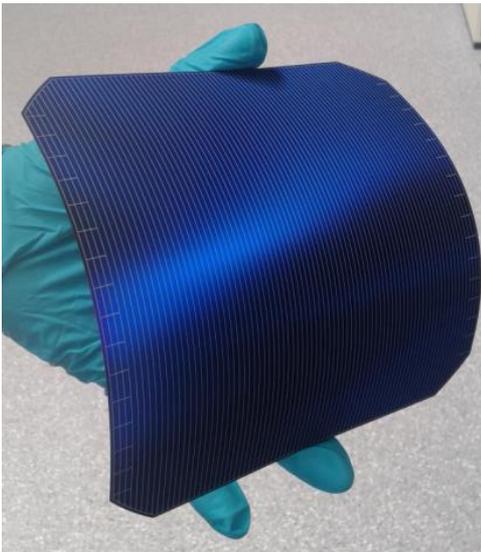

1000 module produced power between 300-320W measured with black backsheet

As-cut Si wafer thickness

MEYER BURGER

90 μm thickness HJT cell

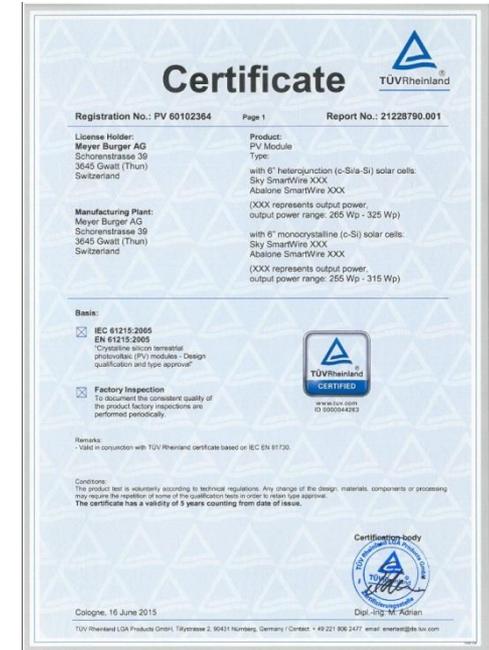

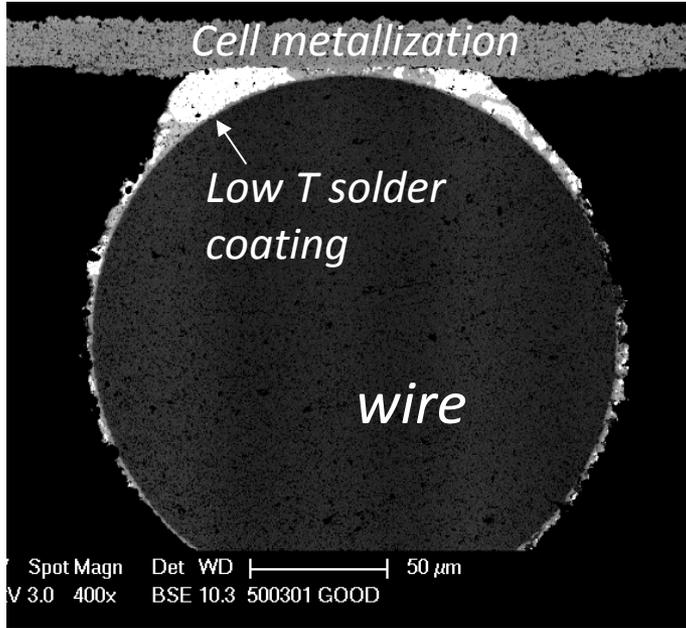

- Cell: Thin wafer \Rightarrow same efficiency
- Module: thin cell \Rightarrow + 4 W

«The thinner the better»

Life time and cost

MEYER BURGER

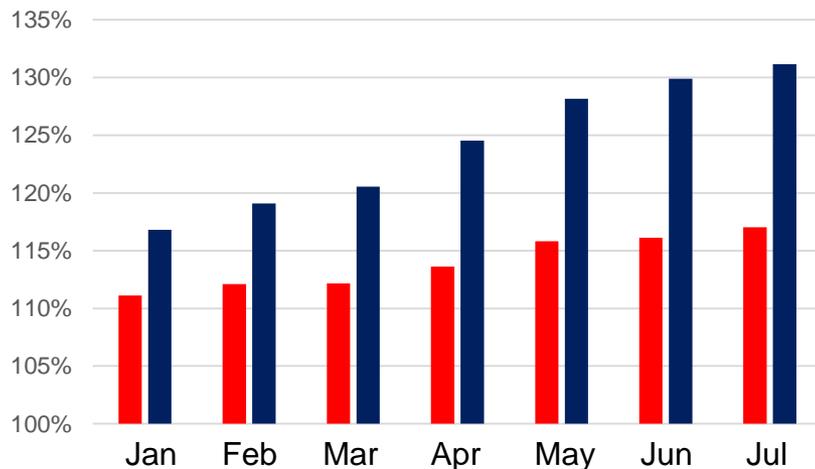

Bifacial MB test module

MEYER BURGER

UAE: normalized monthly yields
01/2017 to 07/2017

- Bifacial ⇒ 30% more yield vs Mono
- Bifacial ⇒ 14% more yield vs PERT Bifi
- Glass-Glass ⇒ 20 years more life time
